

MDaemon 23.5 - New Feature Highlights

The following information provides a quick overview of new features end users and IT administrators will find useful. A more comprehensive list of fixes and new features can be viewed in the MDaemon Release Notes.

Note: 32-bit versions of MDaemon have been discontinued. MDaemon 22 and newer will only be available in 64-bit. If you are currently running a 32-bit version on a supported 64-bit operating system, you can simply install the 64-bit version over the existing installation.

New Features for Administrators

Passwordless Authentication for Remote Administration

Passwordless authentication has been added to MDaemon Remote Administration. This allows users to authenticate with biometrics, USB security keys, Bluetooth, and more.

Optimize Security Settings with Security Health Check

To help ensure all security settings are configured for optimal protection against spam and other email-borne threats, a Health Check page has been added to the security settings menu.

The Health Check feature allows global administrators to review their security settings and compare them with the recommended settings. They can select multiple settings to change to their recommended values or click a link to go to the page where the setting is located.

Customize MDaemon Plain-text Configuration Files in Remote Administration

Administrators can now directly edit MDaemon's configuration files in Remote Administration. Most of MDaemon's administrative and security settings are stored in plain-text configuration files. These files rarely need to be edited manually, however, administrators can highly customize MDaemon's settings based on their specific needs by editing these files, and with the direct edit feature now included in Remote Administration, administrators will no longer need to edit these files individually on the MDaemon server.

Formatted Email View in Remote Administration

Administrators can now view email messages in Remote Administration as users would see them in addition to being able to view the source in the Message Search and Queues.

New Webmail Features for End Users

Easy Appointment Booking & Calendar Publishing

MDaemon Webmail's new scheduling feature brings appointment booking capabilities for MDaemon users. With this feature, users can publish their available dates and times, and then share a link to their calendar where others can book appointment times that will notify the user of a proposed meeting that can be accepted or rejected.

Note: Appointment scheduling is currently only available in the Pro theme of MDaemon Webmail.

Artificial Intelligence (AI) Email Assist for Improved Email Communication

MDaemon Webmail introduces an artificial intelligence (AI) feature that can be enabled by the server administrator to help users summarize a message, suggest a reply, select a message tone, and simplify the composing process.

Passwordless Authentication for MDaemon Webmail

Passwordless authentication has been added to MDaemon Webmail. This allows users to authenticate with biometrics, USB security keys, Bluetooth, and more.

Other Improvements

MDaemon

- ActiveSync - Logging for Dynamic Screening Access Denied now includes the reason (blocklist, location screening, policy violation).
- The Location Screening option "SMTP connections are accepted but authentication is blocked" is now per country instead of global.
- Updated SpamAssassin to version 4.0.0
- MDaemon Connector has been updated to version 8.0.0
- LetsEncrypt now supports TLS 1.3

MDaemon Webmail

- Added an All Documents toggle button in the Documents view
- A Description column has been added to the Documents view in the Pro and WorldClient themes.

For a complete list of new features and updates, please see the [MDaemon release notes](#).
